Series 681

Pressure reducing valves made of gunmetal with threaded connections

C € ĽK [A[WRAS 8

MATERIAL

SPECIFICATION

1/2" - 2"

Inlet pressure: -20°C to + 120°C

Outlet pressure: 0.5 to 15 bar depending on version

up to 40 bar

SUITABLE FOR

Liquids	neutral and non-neutral	
Air, gases and vapours	neutral and non-neutral	\ge
Potable water cold	up to 40°C	
Potable water hot	up to 95°C	

EXAMPLES OF USE

For the protection of:

- domestic water supply systems

- commercial and industrial plants

against too high supply pressure.

Pressure reducers are used, if within a piping system despite of varying pressures on the inlet side a certain pressure must not be exceeded on the outlet side.

- potable water supply according to DIN 1988
- process water supply in industrial-and building technology
- snow-making equipment
- fire-fighting equipment and sprinkler systems
- shipbuilding industry and offshore plants

APPROVALS DIN-DVGW type examination (up to 80°C)

Type approval ACS

Type approval WRAS (up to 85°C)

Type approval PZH

MATERIALS

Component	Material	DIN EN	ASME
Inlet body	Gunmetal	CC499K	CC499K
Outlet body	Gunmetal	CC499K	CC499K
Internal parts	Gunmetal	CC499K	CC499K
	Stainless Steel	1.4404	316 L
Spring	Spring steel with anti-rust protection	1.1200	ASTM A228
Strainer	Stainless Steel	1.4404	316 L

RINA

m	with diaphragm	High-quality, heat-resistant moulded elastomere, fabric-reinforced diaphragm. Adjustment by means of non-rising spindle. Insert with balanced single seat valve made of gunmetal.
Complete valv	e insert SP/HP (order code: 681 Inse	rt-DNseal) available as replacement part can be exchanged without removing the valve.
Complete valv	e insert LP (order code: 681 LP Inser	t-DNseal) available as replacement part can be exchanged without removing the valve.
Built-in dirt tra	ap made of stainless steel.	
Mesh size:	DN 15 to DN 32 0,60 mm DN 40 and DN 50 0,75 mm	
MEDIUM		
GF	gaseous and liquid	for water, neutral and non-sticking liquids, compressed air and neutral gases; optionally wit FPM elastomere seals for non-neutral media i.e. oils, fuels, oil-laden compressed air, etc. No suitable with steam.

TYPE OF LIFTIN	NG MECHANISM
0	without lifting device

OUTLET PRESSURE RANGES									
SP	Standard version	Inlet pressure: up to 40 bar	Outlet pressure: from 1 to 8 bar						
HP	High-pressure version	Inlet pressure: up to 40 bar	Outlet pressure: from 5 to 15 bar						
LP	Low-pressure version	Inlet pressure: up to 25 bar	Outlet pressure: from 0,5 to 2 bar

Series 681:

Dimensioning by pressure loss on the outlet pressure side

Flow chart water

Dimensioning by flow velocity

For liquids:

With help of the chart you can determine the nominal diameter (DN) for a given flow volume V (m³/h). According to DVGW-guidelines (DIN 1988) a flow velocity of 2 m/s in domestic water supply systems should not be exceeded.

For compressed air and other gaseous media:

The usual flow velocity for compressed air is 10 - 20 m/s. For gaseous media the flow volume V should always be shown in actual cubic meters/hour. If the flow volume is given in standard cubic meters, these should be converted into actual cubic meters before using the diagram.

 $V(m^{3}/h) = -\frac{V_{\text{Norm}}(Nm^{3}/h)}{p_{\text{absolut}}(bar)} = \frac{V_{\text{Norm}}}{p_{\tilde{v}}+1}$

Actual cubic meters are based on the prevailing pressure of the medium on the outlet side of the pressure reducer.
